Compliance Letter

VoIP E911 Order - WC Docket No. 05-196

As specified by the FCC VoIP E911 Order dated June 03 2005, submitted below are the details of Capital4's E911 compliance:

- 911 Solution: Capital4 provides 100% of their customers E911 service via either Enhanced Local Service (ELS) provided by Level 3 Communications, or in areas where that service is not available, via a LEC POTS lines connected directly to the customer's phone system.
 - 911 Routing Information/Connectivity to Wireline E911 Network: All calls are routed to the correct PSAP based on ANI, as described above.
 - Transmission of ANI and Registered Location Information: ANI information is transmitted on all calls.
 - 911 Coverage: All service areas are in compliance with the FCC order for E911 compliance.
- Obtaining Initial Registered Location Information: Registered Location Information is obtained in the initial ordering/provisioning process. Capital4 implementations include a fixed phone system and VoIP gateway at each customer location; hence customers can not physically relocate their service dynamically without Capital4 involvement.
- Obtaining Updated Registered Location Information: As described above, customer relocations require direct Capital4 involvement/provisioning action. Updated Registered Location Information is obtained if/when these moves or changes occur.
- Technical Solution for Nomadic Subscribers: Capital4 is utilizing a Static E911 solution. This section is not applicable.
